PAROC Stone Wool Products

PAROC® stands for energy-efficient and fire safe insulation products and solutions of stone wool for new and renovated buildings, HVAC, marine and offshore and other industrial applications. Behind those products there is an 80-year history of stone wool production knowhow backed with technical insulation expertise and innovation.

For a small range of PAROC products, labeled WR grade, a low amount of silicone emulsion is added in the manufacturing process in order to retain the water repellence also after exposure to a high temperature (300°C). Silicone emulsion is not used in production of any other product, though traces of silicone can be found also in the non-WR grade products.

Both the non-WR PAROC products and the WR-grade PAROC products comply with the most stringent Class A of paint wetting impairment standard VDMA 24364, both for the water-based and solvent-based paints (VDMA24364-A-L/W).
