OBJECT CARPET

General Information on the annexe

The EPD document is valid for all products with a total pile weight lower or equal to the declared maximum pile weight of 1100 g/m².

LCA results show a linear correlation with the total pile weight for all impact categories (IC) and all modules (A-D). It is possible to calculate specific LCA results (IC_x) for every carpet (x) within the declared group of products in relation to its total pile weight (P_x).

The total pile weight (TPW) is the sum of surface pile weight (SPW) and dead pile weight (DPW):

$$TPW = SPW + DPW$$

The surface pile weight is the technical relevant value according to EN 1307 and has to be mentioned in technical specification. As shown in the figure below alternatively to the total pile weight the surface pile weight can be used to calculate LCA results (IC_x).

Graph 1: General formula for the calculation of all impact categories IC_x.

OBJECT CARPET

LCA: Results for the product with a total pile weight of 500 g/m²

The declared result figures in module B2 have to be multiplied by the assumed service time (in years) of the floor covering in the building considered.

Information on non-relevant modules:

Modules B3 - B7 are not relevant during the service life of the carpet.

Modules C3/1, C4/2 and C4/3 cause no additional impact.

Module C2 represents the transport for scenarios 1, 2 and 3.
